

CONCEPT MANUAL- PROTECTION FLOOR TILES **FOR MININGS & HEAVY MACHINES**

UNMATCHED LOAD CAPACITY

Engineered for the World's Heaviest Mining Equipment

Protection Floor Tiles deliver a rock-solid foundation designed specifically for the extreme demands of the mining industry. Whether you're storing ultra-heavy dump trucks, loaders, or oversized machinery, these tiles create a stable and uniform surface without the need for expensive concrete bases. Manufactured from 100% recycled material, they combine exceptional strength with genuine sustainability—reducing environmental impact while increasing operational flexibility.

The advanced ribbed underside locks into the ground, preventing movement even on weak soils such as clay, soft sand, or loose aggregates. This unique design ensures the tiles stay firmly in place under massive pressure, providing long-term reliability in the harshest mining environments. With Protection Floor Tiles, you secure both the ground and your investment.

RAPID INSTALLATION — INSTANT SURFACE STABILITY

Engineered for the World's Heaviest Mining Equipment

Protection Floor Tiles turn challenging ground conditions into a safe, stable, and fully load-bearing surface within minutes. With virtually no site preparation required, the tiles can be laid directly over mud, gravel, grass, sand, asphalt, or mixed terrain—instantly creating a durable platform capable of supporting the heaviest mining equipment. Their engineered structure distributes weight efficiently, preventing sinking and ensuring consistent performance even under extreme loads from dumpers, loaders, and large support machinery.

The flexible yet ultra-strong material absorbs pressure while maintaining a perfectly even surface, reducing downtime and enabling continuous operations in all weather conditions. With Protection Floor Tiles, you get speed, strength, and stability—anywhere your operation demands it.
